Elo Interactive Digital Signage (IDS)

The Elo IDS touch displays are more than a television and more than a consumer display. IDS touch displays enable increased customer engagement and metrics for out-of-home environments by adding an exciting new dimension to traditional broadcast digital signage – the power of touch. The new IDS portfolio offers a unique interactive display platform designed to enhance a customer's experience. The interactive, large-format displays are available with the Innovative Elo Zero-bezel APR touch Technology which combines the sensing of touch by recognizing the unique pattern of sounds with an elegant, aesthetically-pleasing seamless design. The large-format, professional displays are not only attractive, but rugged enough to withstand the constant

interactivity inherent in public access venues, such as retail, self-service, hospitality, transportation, education, and healthcare. Built to last in public access environments, unlike typical consumer televisions or displays, Elo touch solutions offer a longer life and a richer digital signage experience.

The IDS displays are available in three sizes, 32-, 42- and 46-inch, to fit a wide variety of configurations and uses and come in an attractively designed package well-suited for many business segments and applications.

The IDS family is also available with an optional [Computer Module](#) in two options, ECM1 and ECM2, to support and deliver engaging and interactive personalized content.
