

## **Win Business - Send your clients an unsolicited proposal for IBM's new next generation x86 servers**

In today's tumultuous economic environment, clients are looking for ways to reduce costs and save money. IBM's newly announced servers based on the Intel Xeon 5500 processor deliver exactly that.

Did you know that clients with prior generation x346 servers who implement IBM x3550 M2 and x3650 M2 servers can realize a greater than 9:1 consolidation ratio and save over 50% on energy costs alone? And, clients with an existing IBM BladeCenter E chassis, with prior generation HS20 blades and existing 1U prior generation Intel Xeon 2 processor servers, can realize up to an 11:1 consolidation ratio and save up to 90% on energy costs alone. With these savings, clients can realize their ROI in as little as 7 months!

It's time to get the word out! Use the attached editable .pdfs to create your own unsolicited proposals to send to your clients and prospects. This is a savings message your clients want to hear!
