INSTANT RECOVERY ON DEMAND BY CA

Powered by **CA**

NON-STOP OPERATIONS, TOTAL DATA PROTECTION

Seismic Instant Recovery On Demand by CA is a powerful, highly sophisticated, host-based business-continuity service offering that provides small to midsize businesses uninterrupted access to critical applications and data during a system failure, unplanned outage or disaster — with no capital investment.

How It Works

By replicating your customer's system environment in our top-tier data facility, this solution provides continual access to mission-critical applications and data. In the event of a system interruption or failure, our solution automatically and seamlessly engages. Business continues as usual.

We Make It Easy

Unlike other managed BC/DR offerings, our complete turnkey service can be deployed in less than 24 hours with no upfront hardware or software purchase requirements for you or your business clients.

Seismic Instant Recovery On Demand by CA affords you the opportunity to provide multiple high-value touch points and services to your customers, including maintenance-mode testing, protection reporting and full disaster-recovery testing, all through one integrated platform.

Benefits include:

- Total account ownership
- Private-label solution option
- Incremental, predictable revenue opportunities
- Only minimal support required beyond initial setup
- Advanced sales and technical-support tools and training for your team
- Service up and running in 24 hours, allowing next-day billing

Platforms Supported

Seismic Instant Recovery On Demand by CA supports most server applications, including Microsoft Windows Server, Exchange Server, SQL Server and IIS, as well as Oracle, BlackBerry Server and other 32-bit and 64-bit Windows servers. Applications may run on physical or virtual servers, including VMware, Microsoft Hyper-V, Virtual Iron or Citrix XenServer.

Key Customer Benefits

- **Peace of mind** — zero downtime, regardless of external/internal system challenges
- **Fast ramp-up, immediate protection** — typically implemented by a trained professional in less than 24 hours, using web-based provisioning tools; minimum effort, minimal intervention
- **No capital investment** — entire data center component, operating system, application and replication software, and hardware components — including server and storage hardware — provided as part of the service
- **No financial risk** — customers can accurately budget for expenses
- **Scalability and accessibility** — customers add/change server connections as needed; anywhere/anytime access to applications
- **Automatic failover** — no customer intervention required in outage situations
