E-MAIL DEFENSE

Powered by **McAfee**

AFFORDABLE REMOTE MONITORING, REMEDIATION AND PREVENTIVE MAINTENANCE

Seismic E-Mail Defense allows you to help your customers maintain productivity and protect their businesses from the latest threats. With a proven, multi-layered framework employed to successfully filter out more than 99 percent of destructive messages, your customers' networks are protected and secure.

Why Seismic E-Mail Defense?

Because spam is not just a nuisance — it's a network threat more menacing than any expert can ever forecast. Our sophisticated form of intelligent programming produces highly accurate threat protection and industry-leading low false-positive rates. Seismic E-mail Defense uses patented detection and filtering systems to identify and control spam.

Rapid, Automated Defense

Unlike traditional on-premises appliance and software products, our affordable, easy-to-use managed service features automated updates to protect your customers' e-mail networks. As new spam-detection techniques and filters are developed, Seismic E-mail Defense can rapidly and seamlessly integrate these into the framework to ensure compliance.

Uncommon Protection

Our worm detection technology identifies and intercepts zero-hour mass-mailing worms before they can enter or leave a corporate network, thanks to advanced content behavior analysis. This technology is further strengthened by signature-based virus scanning from industry leaders Authentium, McAfee and Sophos.

Benefits:

- Free up IT resources and reduce costs
- Increase employee productivity and control
- Integrate network-perimeter e-mail protection

Features:

- **Spam Blocking** — protects customers from the effects of crippling spam volume
- **Fraud Protection** — guards against malicious fraud and phishing scams
- **Virus and Worm Detection** — filters out malware before it can damage internal systems or effect network performance
- **Outbound Message Filtering** — safeguards the integrity of business communications
- **Disaster Recovery Services** — protects against disaster-related data loss and business disruption

Grow Your Services Business

Not only does Seismic E-mail Defense protect against spam, viruses, worms, e-mail attacks and fraud while enabling ongoing communications during server outages, it can also serve as a gateway for introducing your customers to an entire suite of defense offerings that will benefit both their organizations' security and your bottom line.
