# HOSTED WINDOWS SHAREPOINT SERVICES 3.0

Powered by **groupSPARK**

## OFFER WEB-BASED FILE SHARING

Ingram Micro Seismic Hosted Windows SharePoint Services 3.0 is a software-as-a-service (SaaS) solution that allows users to share files on a web-based platform with complete tracking functionality and visibility.

### Freedom to Share

Whether you collaborate with team members across town or with vendors overseas, Seismic Hosted Windows SharePoint Services 3.0 sites let you compare notes, share schedules and work together on virtually any type of file — anywhere, any time and on any web browser. The service also makes it easy to launch and maintain intranets, web sites, bulletin boards and picture libraries, as well as to improve project management with shared calendars and issue-tracking capabilities.

### The Complete Package

This service is an element of the Ingram Micro Seismic Hosted Exchange/SharePoint/CRM launch package. As a complementary service to Seismic Hosted Microsoft Exchange Server and Seismic Hosted Microsoft Dynamics CRM 4.0, this service can be used alone or with the Seismic suite of hosted Microsoft services.

### Private Label

Seismic-hosted SaaS enables you to offer hosted Windows SharePoint Services features without incurring any upfront expenses. As a private-label service, it's branded with your own company name, logo, URL and look and feel, allowing you to maintain ownership of your customer relationships.

### Team Community

SharePoint sites provide places to capture and share ideas, information, communication and documents. They facilitate team participation in discussions, shared document collaboration and surveys. Site content is accessible both from a web browser and through clients that support SharePoint Services. The document-collaboration features allow for easy check-in, checkout and document version control.

### Individual Empowerment

SharePoint site members can find and communicate with key contacts and experts, both by e-mail and via instant messaging. Users can search site content easily, and can sign up for alerts to tell them when existing documents and information have been changed, or when new information or documents have been added. Site content and layout can be personalized on a per-user basis, and web parts can be used to present targeted information to specific users on precise topics.

### Management Enabler

SharePoint site managers can customize the content and layout of sites to ensure that site members can access and work with important and relevant information. Member participation can also be monitored and moderated when necessary. Security and task responsibilities are both flexible and easily accessible. Well-designed lists and entire sites can be saved as templates and reused by individuals, teams or business units across an organization.

GROWTH INSPIRED — A Bold Vision in Services

## Hosted Windows SharePoint Services 3.0 Powered by groupSPARK

### About Ingram Micro Seismic

Seismic is an exclusive Ingram Micro managed-services portfolio that helps resellers quickly and easily leverage and deploy a rich portfolio of services, enabling them to manage technical labor resources more efficiently, build and sustain recurring-service revenue streams, improve service levels and customer satisfaction and increase profitability.

### Key Benefits:

- Includes such IT resources as portals, team workspaces, e-mail, presence awareness and web-based conferencing
- Enables users to locate distributed information quickly and efficiently, as well as connect to and work with others more productively
- No cost to join — start selling hosted SaaS solutions right away
- Supports creation of web sites that increase individual and team productivity through information sharing and document collaboration

### Key Group Collaboration Features:

- **Microsoft Office System integration:** Deep integration with Microsoft Office programs allows teams to collaborate using the familiar tools they use every day.
- **Document collaboration:** Document workspace sites take advantage of platform features by providing a document-collaboration space.
- **Check-in and checkout:** Documents can be reserved by individual users for updating purposes.
- **Document versions:** Document changes are tracked and assigned different version numbers for auditing and rollback.
- **Browser-based customization:** Changes can be made in a web browser by dragging web parts onto personal or public pages, then customizing them. Themes can also be applied using a browser.
- **Presence integration:** Users can determine the online status of site members quickly by sending e-mail or an instant message, adding the member to a contact list, and viewing current free/busy status.
- **Alerts:** A user or site manager can add an alert to a list or list item to receive an e-mail notification when changes are made.
