MESSAGE ARCHIVING

Powered by **McAfee**

STORAGE COMPLIANCE MADE EASIER

With Message Archiving, your customers gain electronic oversight to help manage their entire e-mail environment. They'll minimize the cost and risk associated with noncompliance, loss of proprietary information and inappropriate employee e-mails.

Powerful Solutions Designed to Fit Your Needs

To protect their businesses, your customers need a simple method for storing and retrieving their organizations' incoming and outgoing e-mail. They also must know the content the messages carry. Otherwise, they may incur costly audits, lawsuits and government investigations.

Message Archiving is available in two packages to meet the unique requirements of your customers' businesses:

Archive Compliance Control

Archive Compliance Control is a complete solution with advanced storage, retrieval and surveillance features that work together within a convenient, scalable, affordable managed service.

It includes Archive Surveillance, which works around the clock scanning external and internal e-mail as well as attachments. This pinpoints sensitive or inappropriate content to ensure your customers achieve regulatory and workplace compliance with best practices.

Archive Storage Control Only

Archive Storage Control is available for businesses requiring a storage-only solution.

The powerful functionality of Archive Surveillance allows your customers to use pre-established or custom policies and rule sets while proactively choosing to:

- Route flagged messages based on word category
- Recognize words that are phonetically similar to keywords
- Define exclusions based on To, From, Subject or Content fields
- Review content based on group, user, direction or keywords
- Insert disclaimers automatically, based on message content

Choose Foresight, Not Hindsight

Hindsight may be 20/20, but it's ineffective against evolving e-mail threats. To achieve comprehensive protection, Message Archiving can be combined with the Ingram Micro Seismic E-mail Defense Service, which filters out spam, viruses, worms and other malicious e-mail content prior to surveillance and archiving.

Key Benefits

Help your customers:

- Decrease storage and e-discovery costs
- Reduce financial implications of noncompliance
- Comply with electronic security regulations, including those of the Sarbanes-Oxley Act, the Gramm-Leach-Bliley Act, HIPAA, the Securities and Exchange Commission and the Federal Rules of Civil Procedure
- Enforce corporate e-mail policies and regulations that apply to electronic communications
- Prevent theft or loss of intellectual property and proprietary information
- Decrease the liabilities and risks caused by distribution of inappropriate content

Convenient E-Mail Retention and Retrieval with Archive Storage Control

Businesses requiring a storage-only solution can turn to Archive Storage Control for management of inbound, outbound and internal e-mails. This solution employs:

- One gigabyte of storage per user, per year, with an increase of one gigabyte per user for each additional year of service
- Advanced search options and fast, accurate information retrieval by authorized personnel
- Multiple permissions and authority levels for
