LOG MANAGER

AFFORDABLE AND AUTOMATED COMPLIANCE MANAGEMENT

Ingram Micro Seismic Log Manager, empowers VARs to broaden the services they offer by providing network security and compliance via superior log management. The result is increased revenue, better profit margins and increased customer loyalty, achieved with minimal investment and technical expertise.

By offering affordable, automated and highly reliable services, Seismic Log Manager ensures log-data collection and analysis that guarantees proactive notification of potential compliance-impacting activity. With fast forensic searching and long-term data retention, Seismic Log Manager enables organizations to meet the latest industry and government mandates with confidence.

A Simplified Approach

To comply with today's government and industry mandates, and to enhance overall security, log data must be collected, regularly reviewed and archived.

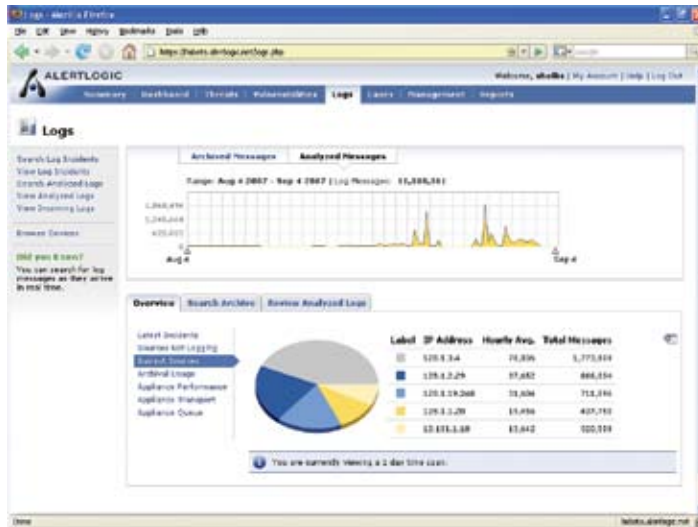

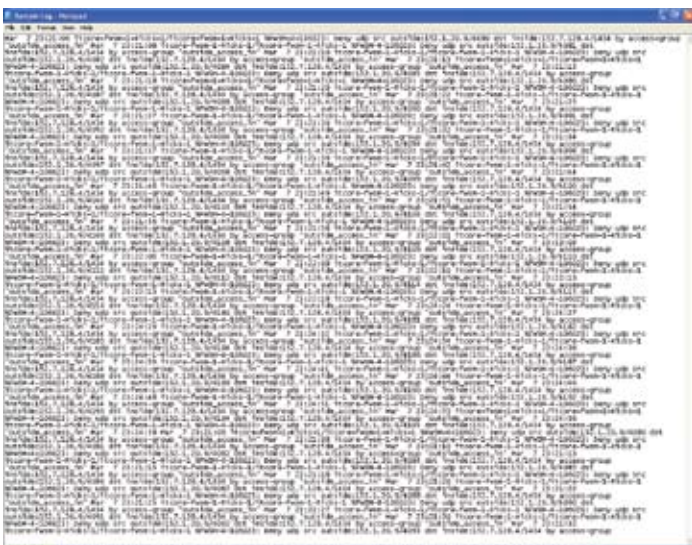

Manually reviewing even a single system or firewall log on a regular basis is virtually impossible because it requires the complex and time-consuming task of analyzing hundreds, or even thousands, of distributed logs.

Most organizations simply do not have the resources for such an intensive review. Previously, the hassle and cost of purchasing and managing a log-management infrastructure, including the necessary terabytes of storage, could be staggering. This was especially true for small and midsize organizations.

Seismic Log Manager can transform log data like this:

Into this:

Innovation, on Demand

Ingram Micro Seismic Log Manager enables management of log data in a revolutionary new way. This new log-management service is the only solution using on-demand architecture to automatically collect, transmit, analyze and archive log data on a business-wide scale.

An in-network appliance collects, aggregates and compresses the data, which is then transported to highly secure data centers. Once there, the data is processed, analyzed, reviewed and stored for reporting, forensics and long-term archiving.

Seismic Log Manager allows VARs to offer a comprehensive security and compliance management service to their customers so they can avoid the effort and cost associated with deploying and managing their own log-management system.
