

# HOSTED OFFICE COMMUNICATIONS SERVER 2007

Powered by **Intermedia**

## A PRACTICAL BUSINESS TOOL FOR YOUR CUSTOMERS

While most companies have e-mail systems they can archive and track, many still use non-secure instant messaging (IM) systems. Often unknown and untracked by IT and management, public IM systems expose a business to serious legal and security risks.

### Seismic Hosted Office Communications Server (OCS) 2007

Providing a secure and professional alternative for IM and unified communications, Seismic Hosted OCS 2007 offers an IM platform that is private and legally compliant. Plus, it integrates with your customer's Seismic Hosted Exchange e-mail.

### Business Benefits

- **Real-time status updates** — With Seismic Hosted OCS customers can see if colleagues are available, busy or offline.
- **Integrated functionality** — Works with Outlook, SharePoint and the desktop client Office Communicator to give your customers the ability to improve operational efficiencies.

- **Conversations are saved** — Your customers can save and search IM conversations inside Outlook, as they do with e-mail.
- **Secure and private** — Secures all IM with end-to-end encryption so sensitive information is never at risk.
- **Higher productivity** — PC-to-PC file-transferring functionality provides your customers with instant document-sharing capability.

### Integrated Communications

In addition to a secure IM tool, Seismic Hosted OCS 2007 provides your customers with a unified communications solution, integrating Outlook e-mail, instant messaging, voice and video, all in one product.

### SALES CONTACTS
