

SEISMIC

Key Benefits

Seismic Threat Manager provides affordable protection for your customers' networks with no upfront investment required, enabling them to:

- Improve network security by identifying threats and vulnerabilities that evade perimeter and endpoint defenses
- Achieve regulatory compliance by identifying incidents and vulnerabilities that could impact compliance-relevant network assets
- Eliminate false alarms typically associated with intrusion-detection technology

Key Features

Intrusion Protection

- Protects against more than 12,000 identified threats
- Optional 24/7 security monitoring via SOC
- Passively monitors network traffic
- Actively blocks attack traffic based on parameters set by customer
- Correlates network events, vulnerabilities and global-threat data
- Multilayered architecture provides superior protection

Vulnerability Management

- Continuous asset discovery, vulnerability assessment and resolution workflow
- Automated network topology and host discovery
- On-demand scheduling flexibility for internal and external scanning
- Comprehensive prioritization and resolution workflow management
- Agentless architecture

Compliance Automation

- Integrated PCI certification scanning by an Approved Scanning Vendor (ASV)
- Comprehensive compliance reporting and dashboards in PCI, GLBA, SOX and HIPAA
- Identification of incidents and vulnerabilities impacting compliance posture

GROWTH INSPIRED — A Bold Vision in Services

Ingram Micro | Seismic

THREAT MANAGER

MANAGED NETWORK SECURITY SOLUTION

Ingram Micro Seismic Threat Manager provides a critical layer of network defense against threats that can easily bypass perimeter and endpoint defenses.

Powered by Seismic Threat Manager is designed to ensure compliance, improve service levels and increase customer satisfaction by constantly protecting your customers' networks from viruses, worms, botnets, Trojans and other threats brought in by roaming laptops, VPN connections, wireless access points, partner portals and other "trusted" sources.

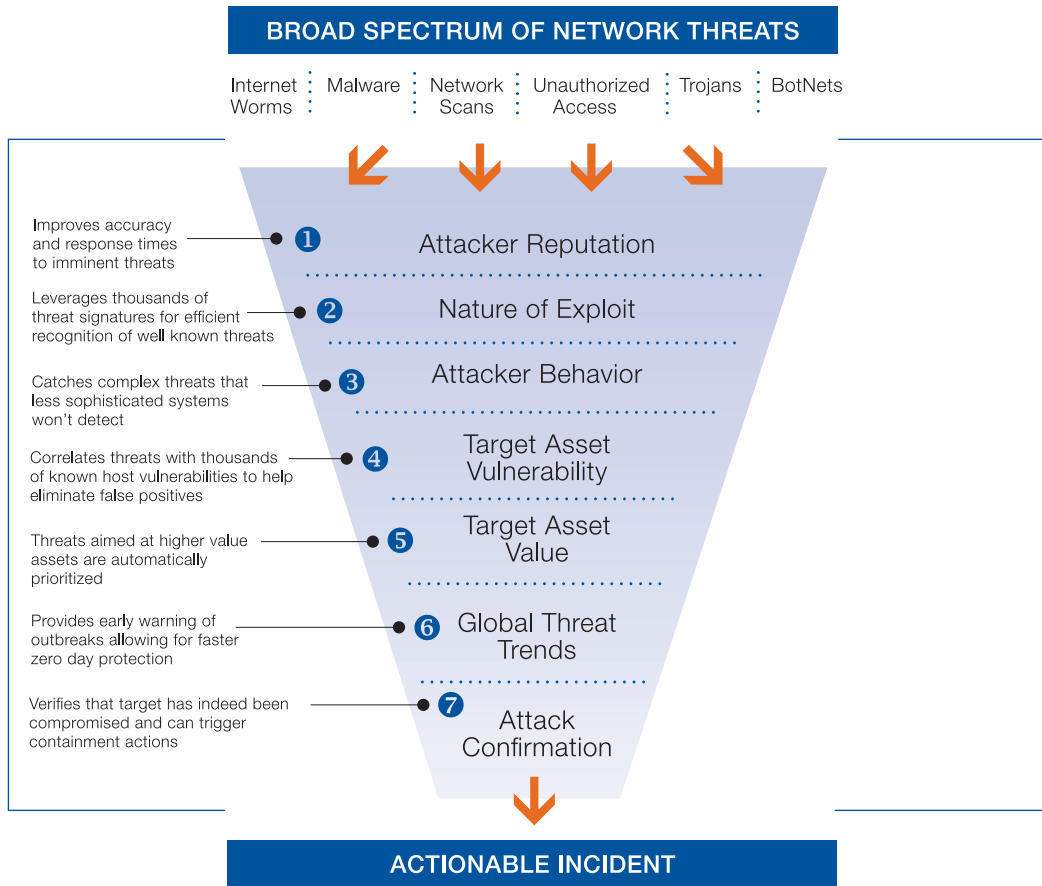

Active Watch

With Seismic Threat Manager, customers can greatly improve their security posture by adding Active Watch.

This service provides professional security expertise to augment staff, resulting in more accurate threat detection and faster, more effective incident response. Active Watch allows customers to receive alert updates by phone or e-mail from GIAC-certified security professionals working in the Security Operations Center (SOC). The SOC monitors the network 24/7 and follows customized escalation responses based on compliance requirements and end-user preferences. Defense, remediation and forensics support is also included.

Advanced Threat Scenario Model

With an expanded threat-management approach that exceeds typical intrusion-detection-and-prevention products, Seismic Threat Manager allows you to maximize your technical resources by eliminating false-positive incidents and reducing associated IT costs.

Why Seismic Threat Manager?

Even though most organizations use perimeter defenses (firewalls) and employ endpoint defenses (antivirus software), many still experience ongoing security breaches. This means that a number of internal networks remain at risk, despite their seemingly proactive defenses. In response, organizations are looking to improve their network security while ensuring compliance with policies and regulatory mandates.

No Assembly Required

With no software or hardware to purchase or maintain and no upfront investment required, Seismic Threat Manager eliminates the burden of deployment, configuration and maintenance. All application capability is delivered through a browser, which allows VARs to provide a greater level of network security to their customers — at a more affordable price.

SALES CONTACTS

For more information about Ingram Micro Seismic Threat Manager, or any of the other hosted applications available through the Ingram Micro Seismic Virtual Services Warehouse, visit www.ingrammicro.com/seismic, call the Ingram Micro Services team at (800) 705-7057, option 5, or e-mail services@ingrammicro.com. For the Ingram Micro Services team in Canada, call (877) 755-5002, option 1 or e-mail services@ingrammicro.ca.
