

SEISMIC

HOSTED SHAREPOINT

Powered by **Intermedia**

## SECURELY STORE AND MANAGE DATA

Give your customers more creative freedom to collaborate on the web by sharing files and contact lists, storing documents online, and posting blogs and wikis — plus more with Seismic Hosted SharePoint, powered by Intermedia.

### Collaboration Made Easy

With hosted Seismic Hosted SharePoint, your customers can enjoy all the great collaboration tools SharePoint has to offer for one affordable, per-user, monthly fee. We host the entire service and provide all software and security updates as they become available.

### Reinvent the Intranet

By integrating with Seismic Hosted Exchange, this service allows your customers to enjoy an instant, powerful intranet with the ability to:

- **Store documents online** — Everyone works off a single, centrally stored version of every document, which can be easily accessed using a hyperlink.
- **Lock files** — Lock documents while they're being edited, to prevent accidental overwriting.
- **Run blogs and wikis** — Improve interoffice communications and keep all staff in the loop.
- **Use a single sign-on** — Your customers can instantly log onto SharePoint using the same usernames and passwords as on their Exchange mailboxes.

### Build Your Linecard

Once your customers start using Hosted Exchange, they're likely to add additional services such as Microsoft Dynamics CRM and Hosted SharePoint — giving you increased revenue per account. Selling our entire suite of Seismic-hosted solutions allows you to enhance customer entanglement. As you add new hosted solutions to your line card, you increase your potential to become your customers' go-to provider for all other managed services.

### Business Benefits

- **Tight integration** — Works closely with Seismic Hosted Exchange 2007 and links smoothly with Internet Explorer
- **Improved functionality** — Provides top-notch collaboration, portals, search, content management, administration and platform functionality
- **Make work easier** — 40 application templates for WSS 3.0 to choose from
- **Enhanced security** — Includes improved permissions, security groups and administration hierarchies

## CONTACTS
