

MANAGED NETWORK SECURITY SOLUTIONS

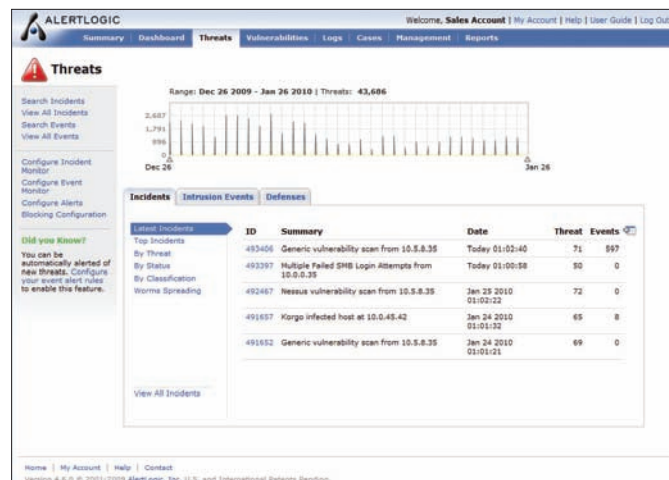

Ingram Micro Seismic Threat Manager allows you to offer your customers possibly the best defense against sophisticated network attacks. As compliance requirements grow more complex due to increased financial dependence on application software and data, advanced cybercriminal activity and escalating regulations, your customers need a simpler, smarter method of protecting their networks.

Why Seismic Threat Manager?

To defend and protect your customers' networks against increasingly complex internal and external threats, Seismic Threat Manager leverages a patented, cloud-based system to automatically identify behavior patterns that most network security products miss entirely.

For over-regulated businesses with under-funded IT departments, Seismic Threat Manager is the smartest network security solution you can offer to:

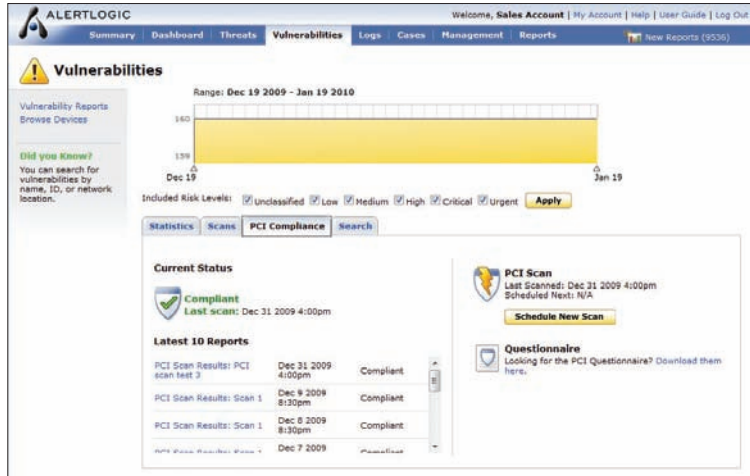

- **Defend and Detect** — Our patented 7-Factor Threat Scenario Modeling correlates intrusion alert data with vulnerability assessment and real-time threat-trend information from all customers to ensure that risks are quickly identified and eliminated.
- **Assess Vulnerability** — Seismic Threat Manager scans your customers' networks to determine vulnerability and provides the knowledge to remediate risks and proactively defend their systems.
- **Monitor Threats** — Your customers will enjoy 24/7 internal network monitoring and faster, more effective incident response by certified security experts in our Security Operations Center (SOC).
- **Defend** — Protect your customers' networks from within by detecting worm infections at their source and blocking them at firewalls, switches and routers before they spread.
- **Ensure Compliance** — Schedule quarterly PCI internal and external scans to keep your customers up to date with compliance and generate the proper reports.
- **Assess Vulnerabilities** — External and internal vulnerability scans are run to proactively identify vulnerabilities that could lead to potential security incidents and determine where your customers' networks may be susceptible to security breaches.
- **Manage Workflow** — Turn threat data into an audit-ready process, backed by our workflow automation technology and compliance expertise.

Quickly identify threats in the user interface.

Threat Manager Powered by Alert Logic

AlertLogic is an approved scanning vendor for PCI quarterly scans.

Comprehensive out-of-the-box reporting.
