EFFECTIVE WEB PROTECTION

Seismic Web Protection is a fully managed web security solution that delivers effective protection against constantly evolving threats such as spyware, viruses and phishing attacks. Our service incorporates proven technology to prevent unauthorized internet activity.

Early Detection and Prevention

Offer your customers ongoing protection against the latest threats with Seismic Web Protection. Our service detects and eliminates malicious code at the network perimeter to block spyware, viruses and phishing attacks before they can infiltrate the business network. It also protects businesses by preventing exposure to inappropriate web content.

Protect and Serve

Protect your customers from threats and help give IT administrators peace of mind, visibility and control over internet usage. With Seismic Web Protection you'll realize the benefits of recurring revenues. You can spend more time growing your business and less time repairing computers corrupted by malware.

Benefits:

- Reduce disruption of daily business
- Monitor network health
- Increase network capacity
- Improve employee productivity
- Eliminate regulatory compliance violations
- Protect against fraud and data theft

Features:

- Spyware Blocking — Reduces IT costs associated with removing malware from infected PCs, while minimizing business disruption
- Blocks Viruses — Guards against malicious fraud and phishing scams

- Anti-Phishing Measures — Promotes a safer work environment to protect employees from identity theft and limit liability for businesses
- Safe Search — Helps boost productivity, conserve network bandwidth and reduce legal liability
- Extensive URL Filtering — Safeguards integrity of web use and controls employee access to inappropriate content

How Does It Work?

Seismic Web Protection works at the network perimeter to protect the entire network, including remote users, and provides continuous updates to guard against the latest threats with around-the-clock service and support.

By routing web traffic through our proxy servers and filtering the traffic according to policies established in the control console, threats are stopped safely at the network perimeter before they can reach the end users' computers or networks.

Our service specifically applies content control and phishing policies to prevent users from accessing inappropriate web sites. Spyware payloads are blocked as they attempt to "phone home," and an access-denied message is displayed when an undesirable web page is blocked.

Grow Your Services Business

Not only does our service scan for malicious code, and block spyware, viruses and Trojans from entering your customers' networks, it can also provide an open door to introduce your customers to our entire suite of defense services offerings. Use the chart on the next page to select which options can grow your services business the most.
